

INTEROFFICE MEMORANDUM

DATE: May 3, 1993

TO: Bridge, Construction, District Engineers, Roadway, State Aid, Traffic

FROM: Robert L. Walters, Assistant Chief Engineer - Design

SUBJECT: 1993 Standard Specifications
Sec. 604.03(f)(3)
Pavement Markings

For purposes of pavement marking placement, the 1993 Standard Specifications require that a notation be included in plans identifying the route as either high volume or low volume. Accordingly, a current traffic volume of 2000 vpd has been established as the determining criteria. The attached information provides details leading to this determination.

Facilities having a current ADT of 2000 vpd or less will be designated as "low-volume". Facilities with a current ADT exceeding 2000 vpd will be designated as "high-volume".

Please take appropriate action to see that this designation is included in all future jobs, as appropriate, including those jobs in the May 1993 letting.
